LIGHTING

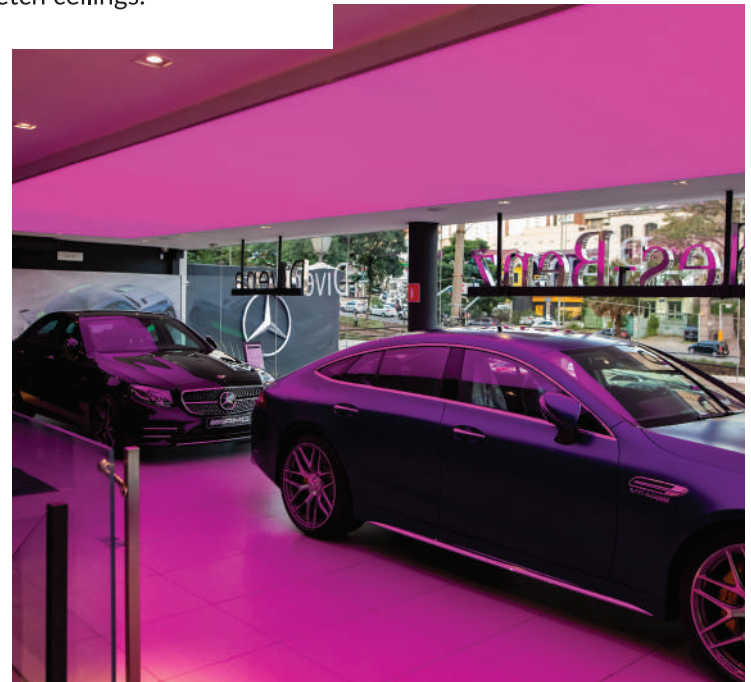

Tensoflex USA translucent stretch ceilings assure excellent diffusion of light, seamless wide dimensions and three-dimensional shapes in horizontal or vertical panels.

LIGHTING

The evolution of our profiles and installation systems provides a simple and easy way of removal and reinstallation of our stretch ceilings.

INTERIOR DESIGN

Combining a very practical and clean installation, Tensoflex stretch ceilings replace traditional materials such as plaster, modular and popcorn ceilings.

Featuring various colors in matte, lacquered and metalized finishes, Tensoflex stretch ceilings allow a wide range of three-dimensional shapes and full integration with lighting, air conditioning, sprinklers and smoke detectors.

Manufactured from sustainable raw materials, within strict industrial process, Tensoflex plastic films are certified by national and international fire laboratories with a 10-year warranty.

MARKETING & ADVERTISING

GEOKLOCK

A company of **EBPO**

Tensoflex features various products with state of the art elements like LED lighting, lighting controls and high resolution printing, transforming corporate imaging and product branding into a whole new level.

ACOUSTICS

The introduction of small holes, in specific diameters and spacing, shifts the sound absorption curve and increases absorption properties of Tensoflex stretch ceilings, representing an interesting option for sound correction in food courts, convention centers, airports and public buildings.

DESIGN LUMINAIRES

Tensoflex offers a wide range of solutions for lighting projects. From the simple closure of niches to the development of exclusive lighting fixtures using the best and most modern options in LEDs.
